I am a software engineer with experience in backend development. I have worked on banking applications and I wish to continue in this field.

Skills

Python, SQL, Docker, Java, Oracle, Linux, Git, Jira

Experience

Software Engineer | Hindustan Software Services | Jan 2019 - Present

I am responsible for the maintenance of the loan processing module, which handles around 4,500 applications every month.

I have written the Python scripts for the month end report, and now it takes 20 minutes instead of one day.

I coordinate with the testing team of 5 members to fix the defects before every release.

I migrated the report database from Oracle 11g to PostgreSQL 14 in the year 2022.

Trainee Engineer | Hindustan Software Services | Jul 2017 - Dec 2018

I received training in Java and SQL, and I supported the senior team in production issues.

Projects

Attendance System

I developed one attendance system for my college using Python and MySQL, which is used by 120 students.

Education

B.E. Electronics and Communication | 2017
