

Arjun Krishnan

arjun.krishnan@example.com | +91 90055 66775

Backend dev, 5 years. Mostly Python, some Go when the team asked for it. Prefers boring technology.

Skills

Python, Go, SQL, Docker, AWS, Celery, Jenkins, Linux

Experience

Backend Developer | Zoho Creator | Jan 2021 - Present

Moved our billing cron jobs from a single EC2 box to Celery 5.3 on ECS; the nightly run went from 3h10m to about 40m.

Wrote the retry logic for the Razorpay webhook after we double-charged 17 customers in March. The postmortem is in the wiki.

On a team of 6, I mostly do code review and fix flaky tests in Jenkins.

Helped the support team write three SQL queries so they stop pinging us at night.

Junior Developer | Local startup in Coimbatore | Jul 2018 - Dec 2020

Built a Flask admin panel for a textile client; they still use it, I am told.

Learned Docker the hard way when production and my laptop disagreed.

Projects

Mess Menu Bot

A Telegram bot for my hostel mess menu, about 300 users, runs on a Raspberry Pi 4. Not great at frontend, learning React slowly.

Education

B.E. Mechanical Engineering | 2018 (switched to software in the final year)
